## Features

Pressure rating up to 5000psig (340bar) @38°C (100°F)  
Temperature rating from -53°C(-65°F) to 232°C (450°F)  
with standard PTFE packing, up to 315°C(600°F)  
with PEEK packing Compact forged body with straight and  
angle pattern for design of miniaturized fluid systems  
Hardened stem threads and forged body for long cycle life

Integral bonnet design to eliminate unintentional stem back-out  
Panel mounting without packing disruption  
Wide choices of port sizes and end connections

## Application

Regulation and shut-off of fluids and gases for wide range  
of general purpose  
Sampling systems, laboratories, corrosive and high  
pressure service, valves - pressure gauge and cylinder,  
panel board instrumentation

## Sour Environment Services

UNILOK valves are comply with NACE MR-  
0175/ISO 15156 for sour oilfield application or NACE  
MR-0103 for petroleum refining operations.  
To order, add-N to the end of part number.

## Cleaning

UNILOK valves are free from machine oils, loose particles  
and grease throughout the close cleaning process.

## How To Order

UNILOK VN5 series needle valves are ordered by part  
number as shown below.

## Testing

Every valve is 100% factory tested with air and nitrogen at  
1000psig(69bar) for leakage at the seat and packing. Each  
test is performed to a maximum allowable leak rate of  
0.1scc/min.

## Important Notification

Proper installation, materials compatibility, operation  
and maintenance of these valves are the responsibility  
of the user. The total system design must be taken into  
consideration to ensure optimal performance and safety.  
The packing adjustment may be required during the  
valve's service life.

**Example:** The following part number, *VN52U-04T-SS*  
is designated for VN5 series needle valve with both 1/4"  
UNILOK tube fitting, 316SS, round handle.

## Number of Handle Turns - Flow Coefficient (Cv)

Stem Types

Metal to metal vee stem is standard for pressure tightness even at elevated temperature. Regulating stem and soft-seat stem with KEL-F are available as optional. The excessive force when closing valve may damage both seat and stem tip, particularly soft-seat stem.

**Vee Stem**  
Pressure tightness at elevated temperature

**Regulating Stem**  
Flow rate control

**Soft-seat Stem**  
Repetitive shut-off for gas

Handle Types

Black nylon round handle is standard. For the valves with brass body and soft-seat stem, standard round handle is recommended. Optional stainless steel bar handle is available.

Features

- Pressure rating up to 6000psig (413bar) @38°C(100°F)
- Temperature rating from -53°C(-65°F) to 232°C(450°F) with standard PTFE packing, up to 315°C(600°F) with PEEK packing
- High temperature application is available Grafoil packing, up to 648°C(1200°F)
- Compact body design
- Hardened stem threads and forged body for long cycle life
- Integral bonnet design to eliminate unintentional stem back-out
- Stop pin to prevent accidental bonnet disengagement

Application

Severe service application, steam service in power plant, hot condensates

Sour Environment Services

UNILOK valves are comply with NACE MR-0175/ISO 15156 for sour oilfield application or NACE MR-0103 for petroleum refining operations. To order, add -N to the end of part number.

Cleaning

UNILOK valves are free from machine oils, loose particles and grease throughout the close cleaning process.

Testing

Every valve is 100% factory tested with air and nitrogen at 1000psig(69bar) for leakage at the seat and packing. Each test is performed to a maximum allowable leak rate of 0.1scc/min.

Important Notification

Proper installation, materials compatibility, operation and maintenance of these valves are the responsibility of the user. The total system design must be taken into consideration to ensure optimal performance and safety. The packing adjustment may be required during the valve's service life.

ISO7/1 Tapered Threads (PT) are available for all fractional sizes of VU6 series valves.  
Add "R" as a suffix instead of "N".

Stem Types

Metal to metal vee stem is standard for pressure tightness even at elevated temperature. Regulating stem, ball stem and soft-seat stem with KEL-F are available as optional. The excessive force when closing valve may damage both seat and stem tip, particularly soft-seat stem. Vee, regulating, ball and soft-seat are non-rotating stems.

Panel Mounting Procedure

Loose handle set screw using appropriate allen key.

Disassemble Lock nut and panel nut.

Insert the valve into the panel hole.

Tighten panel nut and Lock nut onto the valve bonnet.

Reassemble handle.

Tighten panel nut when fully closing of the valve.

Pressure -Temperature Rating
